GMO Cookies*

Light Up Cup 2022

1st Place - *Best Sativa Pre-Roll - Melonade*

CANNA ORGANIX

Flower

We utilize greenhouses for our gardens and were one of the first to bring high-quality greenhouse grown cannabis to the market

Hand-Trimmed.
Hand-Selected.

Plant Growth

We care very much about sustainable practices. Our flower is grown in climate-controlled greenhouses and we **only** use natural and organic based nutrients and OMRI certified pesticides.

Plant Care

All of our plants are cared for individually by loving and intentional hands. Our methods promote high levels of terpene production in our plants and resulting products, setting them apart from most other products in the industry.

Drying and Curing

We take drying and curing seriously to preserve the terpenes generated during the growth of the plant. Usually the cure process occurs over a span of 21 days, but we listen to our plants, as each strain has its own unique needs. Some may cure for more or less time.

Hand Trimming

By hand trimming, we are able to produce a better end-product than can be done with machine trimmers. Taking a highly customized approach to deliver beautifully crafted cannabis buds.

Bags And/Or Jars

Mylar, 100% recyclable Glass, 100% recyclable

CANNA ORGANIX

Pre-Rolls

— Made With our Multiple-Award Winning Flower —

All bud, no shake, no trim, no bullshit

Like our flower prepacks, buds are manicured by hands ensuring not only trichome preservation, but that only choice buds are in our rolls. All of our flower is hand trimmed and our pre-rolls are hand packed in small batches. Buds for flower packs are separated from small buds that are used for joints. Our pre-rolls are made from 100% flower material, never using any shake
All of our products are packaged to-order ensuring no old products are sent to stores

All joints are .5g & available in:

- Single
- 2-Packs
- 13-packs

Sauced & Tossed

Infused Pre-Rolls .5g 2-pack

Infused through our proprietary process with nectar from the same strain of flower and hand painted with the strain specific High-Terpene Extract (HTE)

Hand Tossed

These pre-rolls are then hand tossed in THCA crystalline, resulting in a POWERFUL, slow, and consistent burning product.

CANNA ORGANIX

Vapes

Strain-specific, cannabis derived, extract infused

HTE

High-Terpene Extract

Our HTE vape cartridges are made with 100% cannabis-derived strain-specific terpenes and in-house strains, and distillate. Pure terpenes and THC cannabinoids provide an ultra-pure cartridge for the flavor connoisseur.

For those seeking stronger flavor

HCE

High-Cannabinoid Extract

Like our HTE cartridges, HCE carts are made with 100% cannabis-derived strain-specific terpenes, in-house strains and distillate. For our HCE's, we ramp up the cannabinoids and tone down the terps to bring an ultra-pure cartridge that packs a punch.

For those seeking stronger effect

*Not indicative of current availability, see menu for updated strain list

Concentrates

Temperature & Pressure

Proprietary processing techniques contribute to the unique characteristics our concentrates offer. We are continually innovating our procedures to provide the most cutting edge, valuable and satisfying experience.

Custards

"Stirred"

Our proprietary process allows us to break down cannabis into each individual part. This gives us the ability to remove all fats, waxes, chlorophyll, and other undesirable constituents. We then re-combine all desired components together, forming a product that is purposely formulated to contain only the compounds we want you to experience.

Live Resin

"Shaken"

Our Live Resins provide a tasty, powerful punch at a daily dabbable price! Our full-spectrum, fresh frozen, terp heavy, live resins are processed to have ultra-low solvent profiles, for the cleanest consumption experience.

Terp Crystals

"On the Rocks"

Terp crystals are THCA Crystalline that have been bathed in their strain specific terp sauce. We use a proprietary method that allows us to rapidly separate the terps & cannabinoids that we want from the fats & plant material we don't. This preserves the lighter terpenes giving a true full-spectrum representation of the flower it was extracted from.

^{CBD and THCA} Crystalline

"Rocks"

These Dope Cup award-winning concentrates are our most refined products. They go through a multi-stage crystallization process where all impurities are removed allowing the cannabinoid molecules to come together and bond in their natural crystalline form.

CANNA ORGANIX

Concentrates

continued

Nectar Dram

Payday loving, Pinkies Out!

Our nectar drams are what we get when terpenes separate from THCA during extraction. All that juice floats to the top then is poured off and further clarified before it becomes our drams. With .85g of terp extract and .15g of THCA crystalline, drams provide a great toolkit to take your products to the next level. Cheap dabs can be sauced up to feel more high-end, or you can infuse your own joints and bong hits to really take things to the next level.

RSO

We are beyond excited to announce a potent addition to our concentrate lineup, RSO. Our RSO syringes are exclusively made in house and extracted from full, untrimmed buds. Using pure ethanol at -40 to -80°F, we are able to provide a "Full Spectrum RSO" that is free of excessive amounts of chlorophyll, lipids, and waxes. Superior quality and a competitive price point make our RSO quickly recognizable by the consumer.

Topicals

DIY Topical

3x 100mg Vials

Our Do-it-Yourself topical was created with food-grade ingredients. This DIY topical can make a wonderful addition to lotions, shampoos, massage oil blends, and/or other daily care products.

CANNAWHUPASS

from Canna Organix
came Canna Whupass

For our Canna Whupass products, we use high-purity THC distillate flavored with natural plant-derived terpenes

Partnership with Cannaroma

In addition to in-house distillate processing, our flavoring formulations are achieved through a partnership with Cannaroma and their team of PhDs. The unique combination of Canna Organix's distillate and Cannaroma's flavoring are subject to rigorous quality controls, resulting in a smooth, clean, and flavorful distillate with excellent effects. All our distillate is made in-house, resulting in a non-irritating dab that is clean & pure. In all our Canna Whupass products, no MCT oil, propylene glycol, vegetable glycerin, cutting agents, or artificial additives are ever used.

CANNAWHUPASS

continued

Infuzies

Fruity Infused Joints

The first new product to our Canna Whupass line combines cannabis oil with botanically derived terps that are then infused into flower and rolled into a 1g joint. We use a proprietary technique, similar to that of our Sauced & Tossed to bring you a pre-roll with all the flavor of your favorite Canna Whupass vape and all the punch of an infused joint.

.5g 2-pack

Rotating Flavors

Fruity Pebblz

Tasty dabbable
THCA

Another new product to the Canna Whupass line combines pure THCA with botanically derived terps to create a dabbable "pebble" shaped THCA crystal. We saw the market was in need of a tasty dab, and have released 5 exciting flavors to fill this niche. Highest potency dab for your dollar. Same great Canna Whupass taste in an exciting new look. One gram is equivalent to 20-25 pebbly.

Available Flavors

Tropical Trainwreck
Washington Apple
Peach Ringz
Berry Orange Pez
OMGuava

CANNAWHUPASS

All-in-One Vapes

Introducing the Canna Whupass All-in-One Vape – a portable and disposable vaporizer designed for flavor, vapor quality, and consistency. With an unobtrusive design featuring a discreet side window to monitor the oil level, it's equipped with practical features like

- Anti-clogging
- Ikonic Ceramic Coil
- Micro USB rechargeability
- Inhale-activated system
- Heavy metal tested
- 280MAH Battery

Inside, our distillate is meticulously crafted in-house. Using a molecular still, combining distillate and Cannaroma's botanically derived terpenes for purity and exceptional taste.

Liquid Diamond Live Resin

Strain specific High Terpene Extract with THCA

Carts
Ceramic

All-in-Ones

Our Liquid Diamond Live Resin Cartridges and All-in-one Vapes are crafted with precision and expertise, delivering an unparalleled fusion of potency, flavor, and convenience.

The live resin extraction process captures the plant's essence at its peak, preserving a rich spectrum of cannabinoids and terpenes. The result is a cartridge that boasts an exceptionally potent and flavorful profile, providing users with an authentic and full-spectrum cannabis experience. While the Liquid Diamonds ensure the potency reaches the heights you want without sacrificing anything that makes Live Resin so enjoyable.

For those who crave simplicity without compromising quality, our All-in-one Vapes offer the perfect solution. Pre-loaded with Liquid Diamond Live Resin, these sleek and discrete devices are ready to use straight out of the bag. The device boasts large clouds and a consistent, controlled vaporization process, allowing users to savor the essence of premium cannabis with every cloud blown.
